SaturAid

Granular Soil Wetter

SaturAid is a granular soil wetter made from non-toxic ingredients. When applied, it channels water to the root zone where it is needed most.

SaturAid promotes even water distribution so there is less water run off and dry spots in potting mix and soils. It makes watering, rainfall and fertilisers more effective, even in sandy, clay or compacted soils.

It reduces water use by up to 50%. Any moisture contained in the soil will be twice as effective to the plant. As SaturAid is made from eco-friendly materials, it is safe to use in the vegetable garden. Ideal also to be used in remote native revegetation sites where terrain restricts plant watering and servicing. SaturAid works immediately.

- Reduces water use by up to 50%
- Eco-friendly product
- Suitable for all areas of the garden
- Prevents water run off and dry spots
- Can be used in native revegetation projects where accessibility to water is a problem
- Can also be used in indoor plants
- Facilitates fertiliser

SaturAid

Directions for Use

Standard Planting incl. native revegetation

1. Use 20 grams per plant (approx. 1 loose handful).
2. Mix into soil at 10cm depth or simply sprinkle on top around base of plant.

Garden Beds and Lawns

1. Mix into new garden beds or soil to a depth of 10cm or simply sprinkle onto garden beds or lawns.
2. Use 4 dessert spoons per square metre.

Pots and Hanging Baskets

1. Sprinkle SaturAid onto soil at the following rates:
For a 250mm (10 inch) pot, use 1 dessertspoon
For a 300mm (12 inch) pot, use 2 dessertspoons
For a 400mm (16 inch) pot, use 4 dessertspoons
2. Water in after application.
