

High Density
500gsm Grade

EcoJute™

500gsm Reinforced

EcoJute™ is a 100% natural mulch matting system manufactured from a specially designed high density reinforced needle-punched jute fibre.

Tough Construction

Reinforced with a tough jute-twine grid for extra stability, EcoJute is offered as a short term erosion control and weed suppressant blanket and is designed to compliment our very popular range of both natural and synthetic weed and mulch matting systems.

Biodegradable

Designed to gradually break down over a period of 9-18 months (dependent on conditions), EcoJute comes at a time where, more than ever before, landscape architects, land owners and property developers are looking for natural alternatives to assist planting projects through the critical establishment phase.

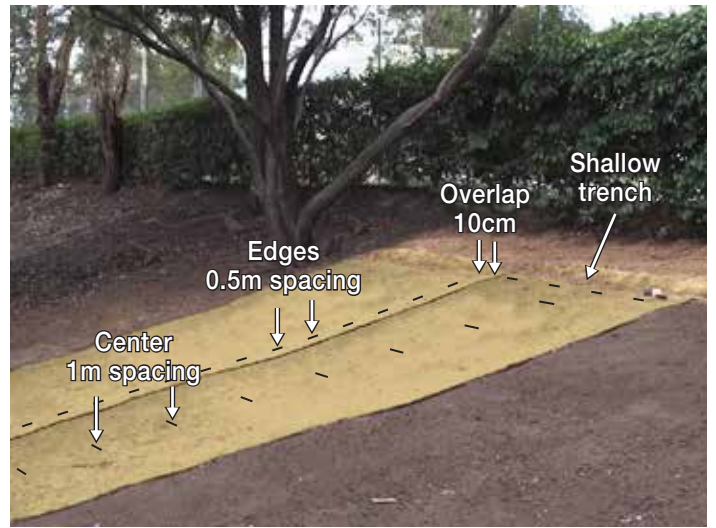

Applications:

- New subdivision landscaping
- Large scale land development
- Sloping sites and swales
- Native revegetation projects
- Motorway and roadside landscaping
- Embankments
- Public amenity gardens

	Higher rolls to overlap lower rolls

Securing Method: (see above)

- Top edge - place in shallow trench and fill with soil to secure
- Edges - pin at 0.5m centres
- Centre - pin at 1.0m centres
- Overlap rolls 10cm

Superior Performance:

Fixing Options:

Standard Weedmat Staples

Used extensively in soft soil situations where the extra length ensures stronger fixture of the EcoJute™ to the ground surface.

Polyprop Pins

Used in high foot traffic situations where plastic pins are preferred instead of steel pins.

Polymaize Pins

Used in situations where environmental considerations are a priority. Being a totally 100% biodegradable natural product, they fit well with EcoJute™ matting providing a total environmental solution. Ideal for areas where pedestrian access may occur.
