100% Biodegradable Seedling Guard
FiberGuard™

100% Biodegradable Seedling Guard

Designed and created in NZ from natural pulp-fibre and coated with a durable food safe moisture barrier.

• Protects plants naturally against browsing animals, herbicide sprays and harsh elements.
• Provides its own micro-climate to help plants survive and enhance growth.
• Manufactured using a tough recycled fibre board that has excellent puncture resistant properties and high bursting strength.
• High ‘Wet Strength’ due to its FDA compliant moisture barrier helping it withstand damp environments.
• Fast and secure install with its innovative tab and slot design. Has two unique stake ports to ensure guards are locked in place and stable in the wind.
• Sloped design for easy placement on hillsides where necessary.
• Neutral colour creates aesthetically pleasing landscapes.
• Removal of guards not necessary as they biodegrade down to mulch, however they can be removed or recycled if desired.
• Provides good protection in the field for up to 24 months. The rate of degradation is dependent on climate and site conditions.

Assembly & Installation Guide

FiberGuard 300 Specifications

- Angled top for installation on slopes
- Punched inlets can be pushed out to allow ventilation and light to pass through (Leave intact for extra spray protection)
