

Ekidna Spiky Heavy-duty Tree Guard

Ekidna Tree Guards are the perfect solution for anyone needing to protect individual tree and shrub plantings from animals including deer, cattle, sheep, hares and rabbits.

Fencing off large areas of land for tree rows is not always possible or desirable. For years farmers have applied all sorts of solutions to try and protect individual paddock trees such as drums, expensive timber posts and rail, but now there is a quicker and more cost-effective solution - the Ekidna tree guard.

- 2.5mm diameter Australian welded wire mesh with spikes
- Mesh is 50mm x 75mm
- Guard heights are 1.2m or 1.7m
- Ships flat for ease of transport and storage
- Internal diameter is 330mm

Livestock operations

- Reduce productivity losses from heat stress
- Shaded pastures maintain soil moisture and summer growth for longer
- No need to fence out areas for trees, maintaining productivity and reducing maintenance

Habitat restoration

- Establish a tree canopy while using livestock to keep weed growth in check
- Effective at stopping seedling attack from many species including deer
- Significantly reduce restoration and environmental costs by purchasing a reusable long-lasting product

Code	Description	Pack Qty
2201	Ekidna Tree Guard 1.2m	1 Unit
