

TerraStop™ Silt Fencing

Temporary sediment barrier

TerraStop™ Silt Fencing is a mesh barrier of tough woven fabric used as a temporary measure to contain silt and sediment and avoid migration of contaminants into rivers, drains and sensitive environments. Ideal for use during construction of earthworks etc.

Features/Benefits:

- Superfine mesh which effectively traps sediment particles.
- Available in 50m rolls with two heights, 860mm and 1 metre.
- Can be installed using either metal posts or plastic Y-posts where corrosion is a problem.
- Can also be attached to existing fencing using special clips.

IMPORTANT: To get the best results, the lower edge of the fabric should be embedded and backfilled in the soil.
