

CombiGuard™ Plant Protection Sleeve

The turn-key approach to successful plant establishment and survival. The CombiGuard enables you to establish smaller, lower cost plants that under the CombiGuard's unique protection ensure high survival rates and vigorous establishment.

The KBC CombiGuard system is a practical, highly effective and cost efficient seedling establishment method. The installation of the CombiGuard when planting seedlings greatly enhances seedling survival, growth and ease of maintenance by protecting your plants from competing weeds, wild animals, sprays and extreme climatic conditions.

Weed control can be easily undertaken to eliminate competing vegetation, using simple herbicides, as the lower 300mm of the seedling is protected from spray contact by the sleeve.

Features/Benefits

- Can be used along with lower cost small grade seedlings making the system cost effective for almost any planting program.
- Reduces the effect of wild animal damage, desiccating wind and frosty ground.
- Helps retain moisture in soil during hot dry times of the year.
- Encourages strong and healthy root and stem development along with exceptional plant growth and survival rates.
- Greatly reduces the need for ongoing maintenance due to suppression of competing weeds and protection from wild animal damage.
- Supplied in a brown tint and blends unobtrusively into the natural landscape.

The CombiGuard system come complete with sleeves, canes and mats.

Code	Size	Pack Qty
3701	CombiGuard (with EcoCoir Mat)	100 Combos
