

NetSleeve™ Cost Effective Plant Protector

The KBC NetSleeve™ is the most popular self-expanding plant protection method for willows and seedlings.

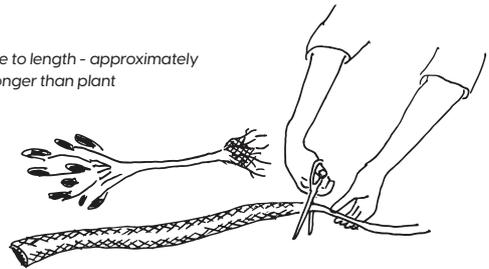

Features/Benefits

- Protects against browsing rabbits, possums and birds
- The lowest cost seedling protector available
- Continuous netting sleeve made from UV stable plastic
- Simply cut to length and slide over young seedlings or willow poles
- Will expand as the seedling/pole establishes
- Very quick to install - great for larger revegetation projects etc. where cost is a major consideration
- Supplied in 250m rolls x 200mm diameter
- This is the same product as Netlon

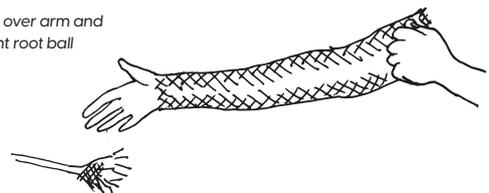

Easy to Install

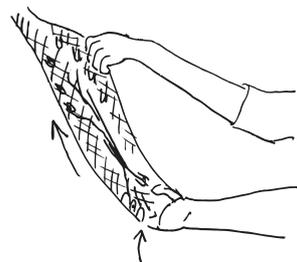

- 1 Cut tube to length - approximately 10cm longer than plant

- 2 Pull sleeve over arm and grasp plant root ball

- 3 Pull plant through sleeve until root ball is just covered by bottom of sleeve

- 4 Heel in with bottom of sleeve also buried
