

ACEGrid Engineered Geogrid

ACEGrid is a high performance engineered geogrid which is engineered for applications of short term and long term soil reinforcement.

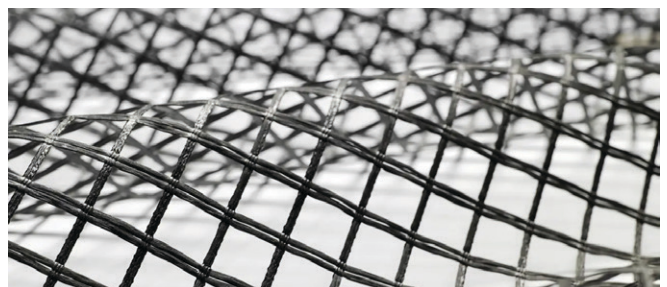

ACEGrid is a high performance geogrid which is engineered for applications of short term and long term soil reinforcement. The product is woven in with strength in both the roll length direction and in the cross roll direction. In applications of soil reinforcement, the use of ACEGrid engineered geogrid allows significant tensile strength to be imparted to soils. ACEGrid is suitable for use in normal occurring soil types, for design lives in excess of 120 years.

Features/Benefits

- High tensile strength
- Low creep characteristics
- High Fibre interlock strength
- High soil interaction and pullout strength
- Suitable for long term reinforcement applications (100 years)
- Inert to chemical degradation
- Resistant to prolonged exposure to sunlight

ACEGrid is suitable for use in the design of the Flex MSE Vegetated Wall System.

Code	Description	Pack Qty
26O79	ACEGrid Geogrid 4m x 50m	1
26O79C	ACEGrid Geogrid 4m per lineal metre	1
