

Filter Fabric

Filter Fabric is a non-woven anti-silting control fabric which facilitates better drainage management. This fabric effectively assists in preventing tree roots from penetrating and forming root balls in drainage systems.

Filter fabric is a non-woven anti-silting control fabric which facilitates better drainage management. It effectively assists in preventing both silt and tree roots from penetrating drainage systems. The fine pores in the fabric discourage penetration by roots and grasses, making filter fabric an ideal choice for embankments and ditches where weed control is also required and as an anti-slumping membrane.

Filter Fabric 60gsm

Code	Size	Pack
26000	1m x 10m	1
26001	1m x 20m	1
26003	1m x 50m	1
26005	2m x 10m	1
26006	2m x 20m	1
26008	2m x 50m	1

Filter Fabric Premium

Features/Benefits

- Heavier grade geotextile with thermal treatment is applied to increase product strength.
- This process results in fabric being excellent for drainage, filtration, and protection.

Code	Size	Pack
260091	0.6m x 50m	1
260092	1m x 50m	1
260093	1.9m x 50m	1
